

Your face
is your
identity

FACEVAULT: SOLUTION OVERVIEW

FaceVault from Logica is a new innovative identity and access management (IAM) solution that uses face recognition technology to enhance the service and user experience for end-users and customers. With FaceVault your face is your identity.

Logica's automatic FaceVault facial recognition solution was initially developed for the purpose of assessing system effectiveness in identifying paying customers entering amusement parks, sports arenas and concert halls through a number of access points as well as for use in monitoring customer flows for the sake of statistical analysis such as dwelling, crowd control and proactive security. Today FaceVault is much more than that.

ADAPTABLE AND SCALABLE

FaceVault from Logica is designed in such a way, that it's adaptable, scalable and expandable, both in terms of system requirements, usage and the surroundings where it can be used. This includes existing systems and services that are based on Cloud Computing.

The FaceVault solution includes various modules, depending on your business needs, such as:

- Central administration and integration with existing infrastructure
- Transfer face recognition data to mobile units for added service
- Embedded into unrivalled range of architectural dynamic sign systems
- Integration with the physical environment such as doors and gates

FaceVault from Logica is designed and enhanced to address various business needs in different business segments, such as:

- Corporate
- Education
- Government
- Healthcare
- Hospitality

GATEKEEPER FEATURES

The advantages of using Logica's FaceVault system as a gatekeeper solution are that resources such as guards and other forms of personnel, currently checking entry/re-entry at the access points, can be redeployed to other locations and purposes, leading to improved service and lower costs. FaceVault will furthermore provide a unique experience for the guests and customers of the year round facilities, due to its ground breaking technical application and simplicity, in that it will improve entry and exit processes as well as further heighten the customer experience in various ways.

Scalable, adaptable
and expandable
incl. support for
Cloud Computing
(SaaS, IaaS and
PaaS)

Key benefits

- A service solution that enhances the user experience based on face recognition
- Relies on human psychology
- Privacy is a core component of the solution (Privacy-by-Design)
- The framework behind FaceVault lays the foundation for non-security solutions
- Serves as a business enabler for enhanced business
- Integrates with leading Identity Access Management and Single Sign-On solutions
- Integration with Logica's mobile payment and security solutions

On a practical level, the solution will provide the ability to automatically register and recognize visitors, users and customers over a longer time period than human concentration normally allows. This in turn increases system effectiveness. And in the case of tracking an individual through a process, for whatever purpose, can be done all hours of the day without the additional cost of tasking employees to perform the measurement.

PRIVACY-BY-DESIGN

Logica consider privacy to be an essential feature of all our security solutions, and FaceVault is no exception. Privacy has been addressed already doing the planning and design phases of FaceVault, ensuring that personal information can either be excluded before data is stored or permanently deleted by automatic means.

All the components are protected with encryption and multifactor authentication incl. role based security. FaceVault also supports tamperproof security solutions such as Hardware Security Modules (HSM) for added security and compliance requirements.

FaceVault is a solution with many possibilities and where innovation is done in partnership with the customer.
